COASTAL BOUNDARY
GREENWICH, CONNECTICUT

LEGEND

EXPLANATION

The coastal boundary map shows the extent of lands subject to coastal management within the coastal zone as defined by the Coastal Management Act of 2000. The coastal zone is a continuous line that follows the general trend of the shoreline and is determined by the Coastal Zone Management Act of 2000. The coastal boundary is delineated from the inland boundary of tidal wetlands as a buffer zone and shall be determined by methods prescribed by the coastal zone management program of the state.

The coastal boundary map includes the coastal boundary by a municipal agency, plan of development, zoning regulations, municipal coastal zone management program, and coastal wetlands plan. The coastal boundary is a moving board of appeals and a reference of a municipal agency, plan of development, zoning regulations, municipal coastal zone management program, and coastal wetlands plan. The coastal boundary is established by the Coastal Zone Management Act of 2000. The coastal boundary does not replace the legal map and was not used to legal determination.

The following sources were used to prepare the coastal boundary: State of Connecticut Department of Energy and Environmental Protection, Coastal Zone Management Program.

DATA SOURCES

COASTAL BOUNDARY DATA: The original coastal boundary maps were created in 1979 and adapted using the 1:24,000-scale US Geological Survey quadrangle maps. The source for the initial coastal boundary map was the 1:24,000-scale US Geological Survey quadrangle maps. The coastal boundary map is based on data from the Office of Policy and Management (OPM) of the Connecticut Department of Energy and Environmental Protection (DEEP) and the Office of Policy and Management (OPM) of the Connecticut Department of Energy and Environmental Protection (DEEP). The new coastal boundary map is based on 1:24,000-scale US Geological Survey quadrangle maps. The Office of Policy and Management (OPM) of the Connecticut Department of Energy and Environmental Protection (DEEP) and the Office of Policy and Management (OPM) of the Connecticut Department of Energy and Environmental Protection (DEEP) are responsible for the accuracy of the coastal boundary map.

BASE MAP DATA: Based on data originally from the 1:24,000-scale USGS 7.5-minute topographic quadrangle maps for the coastal zone as defined by the Coastal Zone Management Act of 2000. The 1:24,000-scale USGS 7.5-minute topographic quadrangle maps for the coastal zone as defined by the Coastal Zone Management Act of 2000 are used to create the base map for the coastal boundary map.

MAP AND DIGITAL DATA: The Coastal Zone Management Act of 1989 provides for the coastal zone management program for the coastal zone.

SCALE OF DRAWING: 1:24,000 (7.5 minute USGS quadrangle map scale equals 1:24,000 after conversion to 2000 State Plane Coordinate System of 1983, Zone 3526).
