EXPLANATION
The coastal boundary map shows the location of all coastal area characteristics listed under the Coastal Area Characteristics Subsection of the Coastal Area Characteristics Section of the Coastal Area Regulations (Title 1). All boundaries depicted on the map are adopted by the zoning board of appeals, variance submitted to the zoning commission, subdivision or site plan review (i.e., site plans whichever is farthest inland; and shall be delineated by the National Flood Map created by DEEP.

DATA SOURCES
Coastal Boundary Data: The original coastal boundary data were created as 1:24,000-scale USGS 7.5 minute topographic maps prepared by the Office of Policy, Planning, and Management (OPM) using aerial photography, digital orthophotography, water, and regulatory information. The data were imported into the dissolved topology system of The Boundary System. Any coastal boundary data that were not depicted on the original 1:24,000 USGS maps prepared by the OPM, were surveyed, using a combination of results from the Office of Policy, Planning, and Management (OPM) and DEEP. The location of the original 1:24,000 USGS maps prepared by the OPM are incorrect or the topographic information is out of date, and the coastal boundary data imported from these maps were corrected based on the location of the original 1:24,000 USGS maps prepared by the OPM.
