Contour lines are used to denote elevation above sea level. This map displays 20 foot contour lines based on LiDAR data for the year 2000. This information is only suitable for general planning and informational use; it is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation every 20 feet at an horizontal accuracy of approximately 3 feet on the ground.

DATA SOURCES

NED MAP DATA - All data is based on 1:24,000 scale and digital geopraphic names, shown and colored according to the U.S. Bureau of Land Management's (BLM) land classification. ADEPT, and hydrography. These map data is provided courtesy of the U.S. Army Corps of Engineers.

STREET DATA - Based on TeleAtlas copyrighted data.

DATA SOURCES - Derived from a statewide 10" Digital Elevation Model (DEM) surface based on the Connecticut 2000 LiDAR ground elevation data. The University of Connecticut, Center for Land Use Applications, and the U.S. Department of Interior, National Park Service, provided the DEM and added it to the NED data on the DEM. The LiDAR data was captured by the U.S. Army Corps of Engineers.

MAP AND FIELD DATA - Visit the CT 2000 website for this map and a variety of other resources. Visit the CT 2000 website to download the free map digital data shown on this map.
