EXPLANATION
Contour lines are used to depict elevation above sea level. This map displays 20 ft contour lines based on the state of Connecticut 2000 Uniform Landbase Information (ULIB) data for the year 2000. This information is only suitable for general planning and informational purposes. It is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut ULIB data for 2000 captured ground elevation every 20 feet at a horizontal accuracy of approximately 3 feet on the ground.

DATA SOURCES
BASE MAP DATA - All data is based on a 1:24,000 scale 1992 U.S. Geological Survey topographic maps, airports, and hydrography. Base map data is subject to correction or completion.
STREET DATA - Based on TeleAtlas copyrighted data.
CONTOUR DATA - Derived from a statewide 10-foot Digital Elevation Model (DEM) surface based
on the Connecticut 2000 ULIB digital elevation data. This data is subject to various errors, including
incompleteness, accuracy, and resolution. The DEM data is derived from the
U.S. Department of Defense's National Basic Geographic Data (NBGD)
and includes all known terrain features. The contour lines accurately
represent the elevation data; however, the contour lines are not shown
for elevations below 10 feet above sea level.

MAP AND CONTENT 2002 - Visit the CT DNR website for this map and a variety of other
tools. Visit the CT DNR website for descriptions of base map digital spatial data shown on this map.
