CONTOUR MAP
Brookfield, CT

EXPLANATION
Contour lines are used to depict elevation above sea level. This map displays 10 foot contour lines based on the DEM data created by the U.S. Geological Survey (USGS). The data was last updated in 1996. This information is only suitable for general planning and educational purposes. It is not intended for exact determinations of elevation where a survey is normally required, for detailed engineering, building, or design purposes. The Connecticut DEM dataset for 2000 captured ground elevation every 20 feet in an internal accuracy of approximately 3 feet on the ground.

DATA SOURCES
- DEM DATA: Derived from a statewide 30- second Digital Elevation Model (DEM) calendar based on the Connecticut DEM dataset for 2000 captured ground elevation every 20 feet in an internal accuracy of approximately 3 feet on the ground.
- CONTOUR DATA: Derived from a statewide 10- foot Digital Elevation Model (DEM) calendar based on the Connecticut DEM dataset for 2000 captured ground elevation every 20 feet in an internal accuracy of approximately 3 feet on the ground.
