DATA SOURCES

The Connecticut LiDAR Data Center (CGLDC) of the Connecticut Department of Energy and Environmental Protection (CT DEP) collected LiDAR data for the year 2000. This information is only suitable for general planning and informational purposes. It is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR data for 2000 captured ground elevation every 2 feet with a horizontal accuracy of approximately 3 feet on the ground.

For unknown reasons, data was collected unevenly in some areas. This resulted in data gaps that affect the overall consistency of the LiDAR data. LiDAR data for the year 2000 is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes.

CONTOUR DATA - Derived from a statewide 10" horizontal Digital Elevation Model (DEM) surface based on the Connecticut 2000 LiDAR ground elevation data. The University of Connecticut Libraries and CLEAR compiled the DEM and added it to during data gaps with information from ortho maps on a scale 1:5,860 scale topographic maps.

STREET DATA - Based on TeleAtlas copyrighted data.
