EXPLANATION
Contour lines are used to denote elevation above sea level. This map displays 20 foot contour lines based on the Connecticut LiDAR data for the year 2000. This information is only suitable for general planning and information purposes. It is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation every 20 feet or horizontal accuracy of approximately 3 feet on the ground.

for unknown reasons, data was collected separately at some areas. This resulted in data gaps that affect the overall accuracy and consistency of the LiDAR data. Contour lines that cross streams flowing through valleys of noticeable relief will form a V-shaped deflection with the apex of the V pointing upstream.

DATA SOURCES
LIIDAR MAP 2000 - The data is based on 2000-year range and explains geographic names, place names, administrative boundaries, parks, airports, and topography. Base map data is shown on the base map.

STREET DATA - Based on TeleAtlas copyrighted data.
