CONTOUR MAP
Haddam, CT
(East)

EXPLANATION

Contour lines are used to denote elevation above sea level. This map displays 20 foot contour lines based on the Connecticut LiDAR data for the year 2006. This information is only suitable for general planning and informational uses and is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2006 captured ground elevations over 20 feet with an absolute accuracy of approximately 3 feet on the ground.

DATA SOURCES

EDM DATA - All data is based on a 1:20,000 scale digital elevation model (DEM) surface. Edits were made to the DEM data to improve the accuracy of the contour lines. The DEM data is a product of the Connecticut Department of Transportation (CTDOT) and the Connecticut Department of Environmental Protection (DEP).

STREET DATA - Based on TeleAtlas copyrighted data.

CONTOUR DATA - Derived from a statewide 10'-scale Digital Elevation Model (DEM) surface based on the Connecticut 2008 LiDAR data and DTM data. The Bureau of Geology and Land Survey (BGLS) and the Connecticut Department of Environmental Protection (DEP) have combined the DEM and DTM to create LiDAR data. The data was then edited to improve the accuracy of the contour lines.

STREET DATA - Based on TeleAtlas copyrighted data.
