EXPLANATION

Contour lines are used to denote elevation above sea level. For some reason, data was collected unevenly in some areas. This resulted in data gaps that affect the overall accuracy of the map. The map contains contour lines that are spaced closely together, while areas with wider spacing represent less detailed elevation information. The map is intended for general planning and informational purposes. It is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut U.S.G.S. dataset for 2006 captured ground elevation every 24 feet at a horizontal accuracy of approximately 3 feet on the ground.

DATA SOURCES

Topographic Mapping - All data is based on a 1:24,000 scale U.S. Geological Survey (USGS) topographic mapping dataset. The data was obtained from the USGS National Map Viewer and it includes details such as roads, streets, boundaries, parks, and other geographic features.

Contour Lines - The contours are based on a 10-foot Digital Elevation Model (DEM) surface based on the Connecticut 2006 U.S.G.S. dataset. The map uses these contour lines to represent topographic variations. The data was sourced from the Connecticut U.S.G.S. dataset.

Note: The map is not a detailed engineering or design tool. It is intended for general planning and informational purposes. The data is subject to errors and omissions. Please consult the USGS National Map Viewer for more detailed information.
