Contour lines are used to denote elevation above sea level. This map displays 20 foot contour lines based on the Connecticut LiDAR data for the year 2000. This information is only suitable for general planning and information type purposes and is not intended for exact determinations of elevation where accuracy is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation every 20 feet at an horizontal accuracy of approximately 3 feet on the ground.

EXPLANATION

DATA SOURCES

RSMS MAP 2005 - All data is based on 1:24,000 scale and 90 meter geographic coverage, nine and one-half meter horizontal accuracy, and submeter, based map data is subject to correction.

STREET DATA - Based on TeleAtlas copyrighted data.

CONTOUR DATA - Derived from a statewide 10 foot Digital Elevation Model (DEM) surface based on the Connecticut 2000 LiDAR general elevation data. The University of Connecticut Center for Cartography, or its agents, have edited or added to this data in order to create this map and edited it to fit in data gaps with information from contour lines from a 1990 1:24,000 scale topographic map.

Map produced by CT GIS Flag 2012. The symbols and data shown are not intended to be used for navigation or legal purposes.
