EXPLANATION

Contour lines are used to denote elevation above sea level. This map displays 20 foot contour lines based on LiDAR data for the year 2000. This information is only suitable for general planning and informational purposes. It is not intended for exact determinations of elevation where a survey is required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevations over 15 feet at an horizontal accuracy of approximately 3 feet on the ground.

DATA SOURCES

- LiDAR DATA: All data is based on US LiDAR data that is available geospatially from the U.S. Geological Survey and the National Elevation Dataset, which is based on the National LiDAR Database.
- STREET DATA: Data is 2007 copyrighted data.
- CONTOUR DATA: Derived from a statewide 10-foot Digital Elevation Model (DEM) surface based on the Connecticut 2000 LIDAR ground elevation data. The USGS DEM data for the study area was provided by the State of Connecticut and served at a 3-foot grid interval. The USGS DEM was created using airborne LiDAR elevation data.
