CONTOUR MAP
Shelton, CT
(North)

EXPLANATION
Contour lines are used to denote elevation above sea level. These lines were created from LiDAR data from 2008. LiDAR data is a method of surveying the Earth's surface using laser technology. This method is used to create detailed and accurate maps of the land. The contour lines on this map represent the elevation of the land at specific intervals. These lines are useful for various applications, such as urban planning, infrastructure development, and environmental studies.

DATA SOURCES
This map is based on LiDAR data from the Connecticut Department of Energy and Environmental Protection. The LiDAR data was collected in 2008 and is used to create detailed maps of the land. The contour lines on this map represent the elevation of the land at specific intervals. These lines are useful for various applications, such as urban planning, infrastructure development, and environmental studies.
