CONTOUR MAP
Salisbury, CT
(Northeast)

EXPLANATION
Contour lines are used to depict elevation above sea level. This map displays 10 foot contour lines based on the Connecticut LiDAR data for the year 2000. This information is only suitable for general planning and informational purposes and is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation over 15 feet at a horizontal accuracy of approximately 3 feet on the ground.

DATA SOURCES
- **3D MAP DATA:** All data is based on LiDAR data and includes geographic names, streets and roads, body names, airports, and hydrography. Base map data is on the Connecticut 2000 LiDAR ground elevation data. The University of Connecticut Libraries for the Connecticut LiDAR dataset for 2000 captured ground elevation over 15 feet at a horizontal accuracy of approximately 3 feet on the ground.
- **CONTOUR DATA:** Derived from a statewide 10-foot Digital Elevation Model (DEM); this is based on the Connecticut 2000 LiDAR ground elevation data. The University of Connecticut Libraries for the Connecticut LiDAR dataset for 2000 captured ground elevation over 15 feet at a horizontal accuracy of approximately 3 feet on the ground.

Street names and roads follow the USGS names and roads. The Connecticut 2000 LiDAR dataset for 2000 captured ground elevation over 15 feet at a horizontal accuracy of approximately 3 feet on the ground.

Street names and roads follow the USGS names and roads.
