CONTOUR MAP
New Milford, CT
(Northwest)

EXPLANATION
Contour lines are used to depict elevation above sea level. This map depicts 20 foot contour lines based on LiDAR data for the year 2000. This information is only suitable for general planning and informational purposes. It is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation over 7 feet at an inherent accuracy of approximately 3 feet on the ground.

for unknown reasons, data was collected unevenly in some areas. This resulted in data gaps that affect the overall accuracy of the LiDAR dataset. Some areas of the land are characterized by widely spaced contour lines, while steep slopes and canyons are represented by closely spaced contour lines. Contour lines that cross streams flowing through valleys of noticeable relief will form a V-shaped deflection with the apex of the V pointing upstream.

DATA SOURCES
BASE MAP DATA - All data is based on 1:24,000 scale topographic maps.
ENVIRONMENTAL PROTECTION DATA - Derived from a statewide 10' Digital Elevation Model (DEM) and based on LiDAR elevation data.

Map prepared by CT DEEP, 2000. The information contained herein is provided for general planning purposes only, and the accuracy and reliability of such information are subject to the accuracy and reliability of the source data and the methods used to process such data. This data is not intended for use in any hazardous or dangerous activity, and the user must verify the accuracy of the data before using it.

Map updated by CT DEEP 2005 - Visit the CT DEEP website for this map and a variety of other CT environmental maps. The content contained in this map is derived from the base map digital spatial data shown on this map.
