CONTOUR MAP
Wallingford, CT
(Northwest)

EXPLANATION
Contour lines are used to denote elevation above sea level. This map displays 20 foot contour lines based on Connecticut LiDAR data for the year 2006. This information is only suitable for general planning and informational type uses. It is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2006 captured ground elevation every 20 feet with horizontal accuracy of approximately 3 feet on the ground.

for unknown reasons, data was collected accurately in some areas. This resulted in data gaps that affect the overall accuracy of the data. Also, some details such as roads and airports, and hydrography. Base map data is outline correct can variable.

DATA SOURCES
BASE MAP DATA - All data is based on 1:24,000 scale and digital geographic name, town and county boundaries. Additional geographic data from airports, and hydrography. Base map data is outline correct can variable.

STREET DATA - Based on TeleAtlas copyrighted data.
CONTOUR DATA - Derived from a statewide 30-
foot Digital Elevation Model (DEM) surface based on the Connecticut 2008 LiDAR-DEM elevation data. The University of Connecticut Center for Survey Research conducted the LiDAR and added it to 30 ft in data gaps with information from contour lines on USGS 7.5-minute
scale topographic maps.
