CONTOUR MAP
Seymour, CT

EXPLANATION
Contour lines are used to depict elevation above sea level. This map displays 20 foot contour lines based on Connecticut LiDAR data for the year 2000. This information is only suitable for general planning and informational uses and is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR data for 2000 captured ground elevation every 20 feet with horizontal accuracy of approximately 3 feet on the ground.

DATA SOURCES
DSS 10-MAP 2000 - All data is based on 1,000-foot contour lines. The Department of Environmental Protection is responsible for maintaining the LiDAR data and sold it in 2000 in data format with information from LiDAR data in the 10-foot digital elevation model.

MAP AND COPYRIGHT 2010 - Visit the CT 1020 website for this map and a variety of other data.

The creation of this map is determined for the use of digital spatial data shown on this map.

Building, or design purposes. The Connecticut LiDAR data is not intended for exact determinations of elevation where information from a statewide collection of ground elevation data is available. Contour lines are used to denote elevation above sea level.
