CONTOUR MAP
Goshen, CT
(South)

EXPLANATION
Contour lines are used to denote elevation above sea level. This map displays 20 foot contour data based on the Connecticut LiDAR data for the year 2000. This information is only suitable for general planning and informational purposes. It is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation every 20 feet at an inherent accuracy of approximately 3 feet on the ground.

DATA SOURCES
RMS MAP DATA - All data is based on 1:24,000 scale U.S. Geological Survey (USGS) topographic maps with additional base map information, including airports and hydrography. Base map data is under exclusive copyright.

STREET DATA - Based on TeleAtlas copyrighted data.

CONTOUR DATA - Derived from a statewide 10 foot Digital Elevation Model (DEM) dataset based on the Connecticut 2000 LiDAR ground elevation data. The University of Connecticut Center for Land Use Education and Research (CLEAR) created the DEM and edited it to fill in data gaps with information from contour lines on USGS 1:24,000 scale topographic maps.

Visit the CT DEP website to download the base map digital spatial data shown on this map.
