Contour lines are used to denote elevation above sea level. The map includes 20-foot contour lines based on the Connecticut LiDAR data for the year 2000. This information is only suitable for general planning and informational purposes and is not intended for exact determination of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation every 20 feet in an inherent accuracy of approximately 3 feet on the ground.

Convenience reasons, data was collected unevenly in some areas. This resulted in data gaps that affect the overall accuracy and appropriate use of derived data products such as topographic maps. For unknown reasons, data was collected unevenly in some areas. This resulted in data gaps that affect the overall accuracy and appropriate use of derived data products such as topographic maps.

For unknown reasons, data was collected unevenly in some areas. This resulted in data gaps that affect the overall accuracy and appropriate use of derived data products such as topographic maps.

This map replaces a similar contour map that was dated August 2010. This map is used for general planning and informational purposes. It is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation every 20 feet in an inherent accuracy of approximately 3 feet on the ground.
