EXPLANATION

Contour lines are used to denote elevation above sea level. This map depicts 20 foot contour lines based on the Connecticut LIDAR data for the year 2000. This information is only suitable for general planning and informational purposes. It is not intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LIDAR dataset for 2000 covered ground elevation every 20 feet with horizontal accuracy of approximately 3 feet on the ground.

for unknown reasons, data was collected erroneously in some areas. This resulted in data gaps that affect the overall accuracy of the LIDAR data. If no data was collected in these areas, no contour lines were depicted. If data was collected the wrong direction or outside the bounds, the contour lines are not totally in the map extent.

STREET DATA - Based on TeleAtlas copyrighted data.
DATA SOURCES - Derived from a statewide 10 foot Digital Elevation Model (DEM) surface based on the Connecticut 2008 LIDAR elevation data. The University of Connecticut Center for Land Use and Environmental Analysis (CLUEA) created the LiDAR and edited it to USGS DEM and edited it to USGS DEM and added it to the data layer with information lines to indicate not on a 10 foot LiDAR geographical map.

Map produced by CT DEP, May 2011.
