CONTOUR MAP
Lebanon, CT
(Southwest)

EXPLANATION
Contour lines are used to denote elevation above sea level. This map displays 20 ft contour lines based on the 2000 LiDAR data for the year 2000. This information is only suitable for general planning and informational use. It is not intended for exact determination of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation every 20 feet with horizontal accuracy of approximately 3 feet on the ground.

DATA SOURCES
BASE MAP (LIDAR): All data is based on LiDAR, which is a geographic survey, shown and displayed on this map. It is generated by the Connecticut Department of Agriculture, Waste Management, and Environmental Protection. Base map data is available for any use.
STREET DATA: Based on Telenav's copyrighted data.
CONTOUR DATA: Derived from a statewide 10-foot Digital Elevation Model (DEM) surface based on the Connecticut 2000 LiDAR ground elevation data. The University of Connecticut, Center for Land Use Education and Research (CLEAR) created the DEM and edited it to fill in data gaps with other existing LiDAR data.

Map prepared by CT DEP, May 2011.
