Contour lines are used to denote elevation above sea level. This map displays 20 foot contour lines based on the Connecticut LiDAR dataset for the year 2000. This information is only intended for exact determinations of elevation where a survey is normally required, or for detailed engineering, building, or design purposes. The Connecticut LiDAR dataset for 2000 captured ground elevation every 20 feet at horizontal accuracy of approximately 3 feet on the ground.

DATA SOURCES

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and scale and displays geographic names, places and baseline digital spatial data shown on this map.

STREET DATA - Based on TeleAtlas copyrighted data.

DATA SOURCES - Derived from a statewide 10-foot Digital Elevation Model (DEM) surface based on the Connecticut 2000 LiDAR ground elevation data. The University of Connecticut Libraries created the map and created the map and color encoded it in grayscale with information from contour lines in a NAD 1983 State Plane Coordinate System of 1983, Zone 3526 base map digital spatial data shown on this map.

CONTOUR DATA - Derived from state wide aerial photography data.

WITH APPROPRIATE ACKNOWLEDGMENTS - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website for this map and a variety of others in PDF format.
