9. Small wetlands
10. Rivers, creeks, brooks, and ponds
11. Towns
12. Roads
13. Railroads
14. Households
15. Miscellaneous

EXPLANATION

The map identifies parcels of land that are owned by the State of Connecticut. These parcels are classified into different categories based on their land use and environmental value. The categories include state parks, wildlife sanctuaries, small forest properties, and areas of special concern. Each category is represented by a specific color on the map. The map also indicates the presence of rivers, creeks, and ponds, as well as roads and railroads that traverse the area. The map is a valuable tool for understanding the distribution and protection of Connecticut's natural resources and ecosystems.

DATA SOURCES

DATA SOURCES

This section includes information on the sources of data used to create the map. It provides details about the datasets, their providers, and the methods used to integrate them. The data sources are essential for understanding the accuracy and reliability of the information presented on the map. The data sources are organized in a clear and concise manner, making it easy to reference additional information or verify the data presented.
