This map displays 1990 black and white orthophotography based on the 1989 USGS 7.5-minute Digital Orthophoto Quarter Quad Quadrangle (DOQQ). The images were taken in the Spring of 1990 during leaf-off conditions and the ground resolution for the imagery is 3.25 feet (1 meter) per image pixel. This statewide orthophotography is not color balanced so some areas may be darker than others. Also, the location and shape of features in other GIS data may not exactly match information shown in the photos. Terrestrial data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed. Due to changes in the location and names of streets, streets in the orthophotography may not match the street layout. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Orthophotography is provided by the USGS and is based on 1989 7.5-minute Digital Orthophoto Quarter Quad Quadrangles (DOQQs) which cover one quarter the area of a USGS 7.5-minute topographic quadrangle map.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, towns boundaries, railroads, and airports. Some map data is neither current nor complete. Base data is based on U.S. Bureau of the Census data.

MAPS AND DIGITAL DATA - Visit the CTDEP website for this map and a variety of others in PDF format. Visit the CTDEP website to download the base map digital symbol data shown on this map.
