EXPLANATION

This map displays 1990 black and white orthophotography based on the 1991 7.5' USGS Digital Orthophoto Quarter Quads (DOQQ’s). A DOQQ overlays the image. The photographs were taken twice a year at the beginning and end of each growing season, and the geometric accuracy for the imagery is ±0.64 feet (2 cm) per image pixel. This method allows orthophotography to be viewed as a 1:24,000 scale map. The orthophotography is not color balanced or enhanced. Areas may be darker than others. Also, the location and shape of features in other GIS data may not exactly match those shown in this photo. Ground control data such as points, major intersections, US roads, state routes, streets, railroads, and ferry crossings are displayed. Due to changes in location and name of streets, streets in the orthophotography may not match the street layer. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and watersheds are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Orthophotography is provided by the USGS and is based on 1991 7.5’ USGS Digital Orthophoto Quarter Quads (DOQQ’s) which cover the area of a USGS 1:24,000 scale topographic quad.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, towns boundaries, roads, and airports. These map data is neither current nor complete. Street data is based on 1:20,000 scale orthophotography data.

MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.
