1990 Orthophotography
Morris, CT

EXPLANATION
This map displays 1990 black and white orthophotography based on the 1990 USGS 7.5 minute Digital Orthophoto Quadrangle (DOQQ) data, which cover one quarter of the area at a 1:24,000 scale. The photographs were taken in the Spring of 1990 during leaf-off conditions and were digitized in 1992. Areas of the imagery that are 3.28 feet (1 meter) per image pixel. This statewide orthophotography is not color balanced as some areas may be darker than others. Also, the location and shape of features in other GIS data may not exactly match the orthophotography shown in the photos. Street-level data such as major interstates, U.S. routes, state routes, streets, railroads, and ferry crossings are displayed. Due to changes in the location and names of streets, streets in the orthophotography may not match the street layers. Also shown are airports, hospitals, educational facilities, train stations, and town sites. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Orthophotography is provided by the USGS and is based on 1990 7.5 minute Digital Orthophoto Quadrangle (DOQQs) which cover one quarter of the area at a 1:24,000 7.5 minute topographic quadrangle map.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic features, places and their symbols, town boundaries, railroads, and airports. Some map data is neither current nor complete. Street data is based on typical maps and GIS data. Street data is not color balanced.
MAPS AND DIGITAL DATA - Visit the CTDEP website for this map and a variety of others in PDF format. Visit the CTDEP website to download the base map digital spatial data shown on this map.
