This map displays 1990 black and white orthophotography overlaid on the U.S. Geological Survey's 7.5 minute digital orthophotographic quarter quadrangle maps. The photographs were taken in the Spring of 1990 during favorable conditions and the ground resolution for the imagery is 3.25 feet (1 meter) per image pixel. This statewide orthophotography is not color balanced so some areas may be darker than others. Also, the location and shape of features in other GIS data may not exactly match the location shown in the photos. Vector data such as major roads, US routes, state routes, railroads, and many waterbodies are displayed. Due to changes in the location and names of streets, streets in the orthophotograph may not match the street layer. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Orthophotography is provided by the U.SGS and is based on the 1988-7.5 Minute Digital Orthophotographic Quarter Quadrangle (DOQQ) which covers the area of a 1:24,000-scale topographic quad map.
BASE MAP DATA - All data is based on 1:24,000-scale and displays geographic names, places, and their symbols, roads, boundaries, railroads, and airports. Some data may not exactly match the vector data.
MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital symbol data shown on this map.
