This map displays 1990 black and white orthophotography based on the 1989 USGS 7.5" Minute Digital Orthophoto Quarter Quad (DOQQ), which covers one quarter of a USGS 7.5" minute geographic quadrangle map. The photographs were taken in the Spring of 1990 during leaf-off conditions and the ground resolution for the imagery is 0.25 feet (1 meter) per image pixel. This statewide orthophotography is not color balanced so some areas may be darker than others. Also, the location and shape of features in other GIS data may not exactly match information shown in the photos. Multilevel data such as major interstates, US routes, state routes, railroads, and ferry crossings are displayed. Due to changes in the location and names of streets, errors in the orthophotographs may not match the street layer. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places, and their symbols, town boundaries, railroads, and airports. This map does not display our complete town data set. Forest data is based on data from Forest Service data.

MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.

DATA SOURCES
ORTHOPHOTOGRAFY - Orthophotography is provided by the USGS and is based on 1989 USGS 7.5" Minute Digital Orthophoto Quarter Quad (DOQQ) which covers one quarter of a USGS 7.5" minute geographic quadrangle map.
