This map displays 2004 black and white orthophotography for the State of Connecticut. The photographs were taken in leaf-off conditions and the ground resolution for the imagery is 0.8 feet per image pixel. Unlike other statewide aerial surveys, the 2004 mosaic is comprised mostly of 2004 photos, but photos taken during the spring of 2000 and 2005 were introduced to improve image quality. This is due to the amount of rainfall the spring of 2004 experienced, making it difficult to survey and label features in those photos. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed. Due to possible changes in street locations over time, locations of streets on the orthophotography may not match the locations of streets on the street layer. Also shown are airports, hospitals, educational facilities, state parks, and area boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Funding for the statewide orthophotography was provided by the State of Connecticut DEP DMR and DCR.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic features, placenames and their substitutes, state boundaries, railroads, and airports. Base map data is subject to revision as new complete, street data is based on Falls Line orthophotograph data.

EXPLANATION
2004 Orthophotography
Colchester, CT
(East)

Map prepared by CT DEP, December 2010.
Map is not colored. Printed from light and manuscript.
