This map displays 2004 black and white orthophotography for the State of Connecticut. The photographs were taken in bright conditions and the ground resolution for the imagery is 0.3 feet per image pixel. Unlike other statewide aerial surveys, the 2004 mosaic is composed mostly of 2004 photos, but photos taken during the spring of 2000 and 2005 were introduced to improve image quality. This is due to the amount of rainfall in the spring of 2004 experience, making it difficult to acquire and ideal conditions to take photos. The location and shape of features in other OED layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railways, and ferry crossings are displayed. Due to possible changes in street locations over time, locations of streets on the orthophotography may not match the locations of streets in the street layer. Also shown are airports, hospitals, educational facilities, town centers, and some neighborhoods. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY: Funding for the statewide orthophotography was provided by the State of Connecticut in 2004. All orthophotography is available on the CT ECO website.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic features, places and their symbols, town boundaries, railroads, and airports. Base map data is available online in ESRI format. Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shows on this map.
