2004 Orthophotography
Montville, CT
(East)

EXPLANATION
This map displays 2004 black and white orthophotography for the
Town of Montville. The photographs were taken in best
image quality and the ground resolution for the imagery is 0.8 feet per
image pixel. Unlike other statewide aerial surveys, the 2004
orthophoto mosaic consisted of 2004 photos. The photos taken during
the spring of 2004 and 2005 were introduced to improve image quality. This is due to the amount of rainfall the spring of
2004 experienced, making it difficult to offer and ideal conditions
for take photos. The location and shape of features in other GIS
layers will not exactly match information shown in the aerial
photography primarily due to differences in spatial accuracy and
data collection dates. Street-level data such as major interstates,
US routes, state routes, streets, railroads, and ferry crossings are
displayed. Due to possible changes in street locations over time,
locations of streets on the orthophotography may not match the
locations of streets in the street layer. Also shown are airports,
hospitals, educational buildings, malls, stations, and ferry terminals.
Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAHY - Funding for the statewide orthophotography was provided by the
State of Connecticut DEP, DPS, and DOT.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places
and their boundaries, roads, rhododendons, and airports. Base map data includes counties and
major highways. Terrain features are shown as a contour
orthophoto mosaic. Street data is based on Telamon orthophoto data.
STATE AND LOCAL DATA - Visit the CT ECO website for this map and a variety of others in
JPEG format. Visit the CT DEP website to download the base map digital spatial data shown on
this map.
