2004 Orthophotography
Redding, CT (East)

EXPLANATION
This map displays 2004 black and white orthophotography for the State of Connecticut. The photographs were taken in leaf-off conditions and the ground resolution for the imagery is 0.8 feet per image pixel. Unlike other statewide aerial surveys, the 2004 system is comprised mostly of 2004 photos, but photos taken during the spring of 2008 and 2009 were introduced to improve image quality. This is due to the amount of rainfall the spring of 2008 experienced, making it difficult to capture and record conditions in that photo. The locations and shape of features in these data will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed. Due to possible changes in street locations over time, locations of streets on the orthophotography may not match the locations of streets on the street layer. Also shown are airports, hospitals, institutional facilities, ruins, stations, and town boundaries. Important geographic features and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Funding for the statewide orthophotography was provided by the State of Connecticut DEP (2004 and 2007).
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their boundaries, town boundaries, railroads, and airports. Image map data to other systems are incomplete. Street data is based on TeleAtlas orthophotography data.

MAPS AND DIGITAL DATA - Visit the CT ECO website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.
