2004 Orthophotography Hartford, CT

EXPLANATION

This map displays 2004 black-and-white orthophotography for the State of Connecticut. The photographs were taken in low-light conditions and the ground resolution for the imagery is 0.9 feet per pixel level. Unlike other statewide aerial surveys, the 2004 mosaic is comprised mostly of 2004 photos, but photos taken during the spring of 2000 and 2005 were introduced to improve image quality. This is due to the amount of rainfall the spring of 2004 experienced, making it difficult to capture ideal conditions in those photos. The locations and shapes of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection date. Street-level data such as major interstates, US routes, state routes, rivers, railroads, and ferry routes are displayed. Due to possible changes in street locations over time, locations of streets on the orthophotography may not match the locations of streets in the street layer. Also shown are airports, hospitals, educational facilities, post offices, and fire headquarters.
