This map displays 2004 black and white orthophotography for the State of Connecticut. The photograph was taken in fall/winter conditions and the ground resolution for the imagery is 0.8 feet per image pixel. Unlike other statewide aerial surveys, the 2004 mosaic is comprised mostly of 2004 photos, but photos taken during the spring of 2000 and 2001 were used to improve image quality. This is due to the amount of rainfall the spring of 2004 experienced, making it difficult to capture and label conditions in the photos. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and color collection date. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed. Due to possible changes in street locations over time, locations of streets on the orthophotography may not match the locations of streets in the street layer. Also shown are airports, hospitals, educational facilities, rail stations, and key boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Funding for the statewide orthophotography was provided by the State of Connecticut DEP, DPS, and DOT.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic features, places, and their attributes, road boundaries, railroads, and airports. Base map data is subject to change over time.
SOURCES AND DIGITAL DATA: Visit the CT DEP website for the map scale or survey of others in 2004 format. Visit the CT DEP website for additional digital spatial data shown on the map.
