This map displays 2004 black and white orthophotography for the State of Connecticut. The photographs were taken in fall JL conditions and the ground resolution for the imagery is 9.9 feet per pixel. Unlike other statewide aerial surveys, the 2004 mosaic is comprised mostly of 2004 photos, but photos taken during the spring of 2000 and 2001 were introduced to improve image quality. This is due to the amount of rainfall during the spring of 2000 experienced, making it difficult to capture and fall conditions in fall photos. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state intraves, streets, railroads, and ferry routes are displayed. Due to possible changes in street locations over time, locations of streets on the orthophotography may not match the locations of streets in the street layer. Also shown are airports, hospitals, educational facilities, railroads, and airports. Data on this map was based on existing data in the USGS National Map viewer. Important geographic locations and waterbodies are labeled.
