This map displays 2004 black and white orthophotography for the State of Connecticut. The photographs were taken in bailout conditions and the ground resolution for the imagery is 9.9 feet per image pixel. Unlike other statewide aerial surveys, the 2004 mosaic is composed mostly of 2006 photos, not photos taken during the spring of 2004 and 2005, to improve image quality. This is due to the amount of rain fall the spring of 2004 experienced, making it difficult to achieve and ideal conditions to take photos. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, U.S. routes, state routes, county roads, and ferry crossings are displayed. Due to possible changes in street locations over time, locations of streets on the orthophotography may not match the locations of streets in the street layer. Also shown are airports, hospitals, educational facilities, maps, stations, and other features. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Funding for the statewide orthophotography was provided by the State of Connecticut DEP OHS and DOT.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, railroads, and airports. Street map data is neither current nor complete. Street data is based on Tal Italia orthophotography.
