2004 Orthophotography
Oxford, CT (South)

EXPLANATION
This map displays 2004 black and white orthophotography for the State of Connecticut. The photographs were taken in fall/winter conditions and the ground resolution for the imagery is 0.8 feet per pixel. Unlike other statewide aerial surveys, the 2004 imagery is comprised mostly of 2004 photos, but photos taken during the spring of 2004 and 2005 were introduced to improve image quality. This is due to the amount of rainfall and the spring of 2004 experienced. Making it difficult to apply and find conditions in this photo. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry routes are displayed. Due to possible changes in street locations over time, locations of streets on this orthophotograph may not match the locations of streets on the street layout. Also shown are airports, hospitals, educational facilities, parks, stations, and major thoroughfares. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Funding for the statewide orthophotography was provided by the State of Connecticut (DEP, DPS, and DOT). ORTHOPHOTOGRAPHY: Data was collected by the State of Connecticut (DEP, DPS, and DOT).
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, river boundaries, railroads, and airports. Base map data is not subject to errors or omissions. Street data is based on TeleAtlas copyrighted data.
SOFTWARE AND DIGITAL DATA: Visit the CT DEP website for more maps and a variety of other GIS services. Visit the CT DEP website to download the base map digital orthophotography data on this map.
