This map displays 2004 black and white orthophotography for the State of Connecticut. The photographs were taken in fall/winter conditions and the ground resolution for the imagery is 0.8 feet per image pixel. Unlike other statewide aerial surveys, the 2004 mapping is comprised mostly of 2004 photos, but photos taken during the spring of 2003 and 2005 were introduced to improve image quality. This is due to the amount of rainfall of the spring of 2004 experienced, making it difficult to arrive and ideal conditions to take photos. The location and shape of features in other OGS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed. Due to possible changes in street locations over time, locations of streets on the orthophotography may not match the locations of streets in the street layer. Also shown are airports, hospitals, institutional facilities, mass transit, and fire boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTOPHOTOGRAPHY (mapping for the statewide orthophotography was provided by the State of Connecticut DEP UGS and DGI)
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and house numbers, town boundaries, railroads, and airports. Base map data was archive scanned and compiled. Street data is based on TeleAtlas orthophotography data.
