This map displays 2004 black and white ortho-photography for the State of Connecticut. The photographs were taken in fall/winter conditions and the ground resolution for the imagery is 0.5 foot per image pixel. Unlike other statewide aerial surveys, the 2004 mosaic is comprised mostly of 2006 photos. Nat photos taken during the spring of 2000 and 2001 were introduced to improve image quality. This is due to the amount of rainfall the spring of 2004 experienced, making it difficult to arrive and ideal conditions to take photos. The location and shape of features in other USGS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed. Due to possible changes in street locations over time, locations of features on the orthophotography may not match the locations of streets in the street layer. Also shown are airports, hospitals, educational facilities, parks, cemeteries, and river boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Funding for the statewide orthophotography was provided by the State of Connecticut DEP, DOT and DOT.
BASE MAP DATA - All data is based on 1:24,000 scale and includes geographic names, places and their symbols, non-boundaries, roads, and endpoints. Base map data sources include swamps, Important geographic locations and waterbodies are labeled.
