This map displays 2004 black and white orthophotography for the State of Connecticut. The photographs were taken in告诉他

conditions and the ground resolution for the imagery is 0.5 feet per image pixel. Unlike other statewide aerial surveys, the 2004

material is comprised mostly of 2004 photos. No photos taken

during the spring of 2000 and 2005 were introduced to improve

image quality. This is due to the amount of rainfall the spring of

2004 experienced, making it difficult to acquire and ideal conditions

to take photos. The location and shape of features in other USGS

layers will not exactly match information shown in the aerial

photography primarily due to differences in spatial accuracy and

data collection dates. Street-level data such as major interstates, US

roads, state routes, streets, railroads, and ferry crossings are

displayed. Due to possible changes in street locations over time,

locations of streets on the orthophotography may not match the

locations of streets in the street layer. Also shown are airports,

hospitals, educational buildings, parks, cemeteries, and town boundaries.

Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Funding for the statewide orthophotography was provided by the

State of Connecticut DEP, DPS, and DOT.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic centers, places

and their symbols, town boundaries, railroads, and airports. Base map data is not further edited or

compiled. Street data is based on Esri data orthophotographic data.

MAPS AND DIGITAL DATA - Visit the CT DEP website for the map map & a variety of other in

PDF format. Visit the CT DEP website to download the base map digital spatial data shown on

this map.
