2004 Orthophotography
Lyme, CT
(West)

EXPLANATION
This map displays 2004 black and white orthophotography for the
State of Connecticut. The photographs were taken in liquid conditions
and the ground resolution for the imagery is 0.5 feet per
image pixel. Unlike other statewide aerial surveys, the 2004
imagery is comprised mostly of 2004 photos, but photos taken
during the spring of 2000 and 2005 were introduced to improve
image quality. This is due to the amount of rainfall the spring of
2004 experienced, making it difficult to apply and ideal conditions
to take photos. The location and shape of features in other US
layers will not exactly match information shown in the aerial
photography primarily due to differences in spatial accuracy and
date collection dates. Street-level data such as major interstates,
US routes, State routes, streets, railroads, and ferry crossings are
displayed. Due to possible changes in minor locations real time,
locations of streets on the orthophotography may not match the
locations of streets on the street layer. Also shown are airports,
basins, educational facilities, railroads, and airports. Base map data is always current too complete. Street data is based on TeleAtlas orthophotography data.

DATA SOURCES
ORTHOPHOTOGRAPHY - Funding for the statewide orthophotography was provided by the
Department of Energy and Environmental Protection (DEEP) and DOT.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places
and their symbols, river boundaries, railroads, and airports. Base map data is always current too complete. Street data is based on TeleAtlas orthophotography data.

MAPS AND DIGITAL DATA - Visit the CT ECO website for this map and a variety of others in
JPG format. Visit the CT DEP website to download the base map digital spatial data shown on
this map.
