This map displays 2004 natural color orthophotography covering the Lyme, East Lyme, Waterford area. The aerial flights spanned two days during September 2004 and the imagery was collected in pansharpened, Red, Green, Blue and Near Infrared which yielded both natural color and false color infrared versions of the completed digital orthophotography. The orthophotos are 0.5 meter (1.64 feet) in resolution. Additional GIS data such as major interstates, U.S. routes, state routes, streets, railroads, and ferry crossings are displayed as well as airports, hospitals, educational facilities, trail systems, and town boundaries. Important geographic locations and waterbodies are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORPHOTOGRAPHY - This image was made possible by a grant from the NOAA Coastal Services Center in partnership with the University of Connecticut, Wesleyan University and the Connecticut Department of Environmental Protection. Data collection and processing was performed by EnviroMedia International.
BASE MAPS - All data is based on 1:24,000 scale and displays geographic names, places and their contents, road, pollution,翔, and railroad. Base map data is national raster and vector product. Source data is based on the National Map by the USGS. DATA SOURCES: The CT DEP website has a contact for base map data and product.
