This map displays 2004 natural color orthophotography covering Long Island Sound coastal communities. The aerial flight spanned two days during September 2004 and the imagery was collected in panchromatic, Red, Green, Blue and Near Infrared wavelengths. This imagery was made possible by a grant from the NOAA Coastal Services Center in collaboration with the University of Connecticut, Wesleyan University and the Connecticut Department of Environmental Protection. Data collection and processing was performed by EarthData Operations.

Important geographic locations and waterbodies are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY - This imagery was made possible by a grant from the NOAA Coastal Services Center in collaboration with the University of Connecticut, Wesleyan University and the Connecticut Department of Environmental Protection. Data collection and processing was performed by EarthData Operations.

BASE MAP DATA - All data is based on 30,000 scales and shows geographic names, places and their centroids; town boundaries, streets, and railroads. Base map data is neither complete nor accurate. Base data is based on Tax Gis data from the Department of Community Development and from the Department of Transportation.

Visit the CT DEP website to download the base map digital spatial data shown on this map.
