This map displays 2004 color infrared orthophotography covering Long Island Sound coastal communities. The aerial flight opened two days during September 2004 and the imagery was collected in postemulsion, Red, Green, Blue and Near Infrared which yielded both natural color and false color infrared versions of the completed digital orthophotography. The orthophotos are 0.3 meter (1.0 foot) in resolution. Additional GIS data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed as well as airports, hospitals, educational facilities, town boundaries, and town boundary schools. Important geographic locations and waterbodies are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY - This imagery was made possible by a grant from the NOAA Coastal Services Center in partnership with the University of Connecticut, Southern Connecticut State University, and the Connecticut Department of Environmental Protection. Data collection and processing was performed by EarthData International.

BASE DATA: All data is based on 1/10,000 scale and displays geographic names, places and their centroids, town boundaries, streets, and railroads. Basemap data is not to scale and not complete. Some data was not available for this product.

MAPS AND DIALOGS - Visit the CTDEP website for this map and a variety of other information. Visit the CT DEP website to download the base map digital spatial data shown on this map.

EXPLANATION

2004 Coastal Color Infrared Orthophoto Norwalk, CT (North)
