2004 Coastal Color Infrared Orthophoto
Norwalk, CT (South)

EXPLANATION

This map displays 2004 color infrared orthophotography covering Long Island Sound coastal communities. The aerial flight opened two days during September 2004 and the imagery was collected in panchromatic, Red, Green, Blue and Near Infrared which yielded both natural color and false color infrared versions of the completed digital orthophotography. The orthophotos are 0.5 meter (1.64 feet) in resolution. Additional GIS data such as major interceptor, US routes, state roads, streets, railroads, and ferry crossings are displayed as well as airports, hospitals, educational facilities, towns, marinas, and town boundaries. Important geographic locations and landmarks are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY - This imagery was made possible by a grant from the NOAA Coastal Services Center. Orthophotography was produced at the University of Connecticut, Wesleyan University and the Connecticut Department of Environmental Protection. Data collection and processing was performed by EarthSource International.

BASE MAPS - All data is based on 1:24,000 scale and displays geographic names, places and their controls, town boundaries, streets, and schools. Base map data is subject to errors and omissions. Base data is updated regularly.

MAPS AND DIGITAL DATA - Visit the CT DEP website to download the base map digital spatial data shown on this map.
