The 2005 orthophotography has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GIS data displayed include major resources, US routes, state routes, streams, ferry crossings, airports, hospitals, educational facilities, tax stations, and area boundaries. Important geographic locations and waterbodies are labeled. The locations and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

**DATA SOURCES**

ORTHOPHOTOGRAPHY: Imagery compiled by James W. Scurlock Co. and published by the DEP Office of Long Island Program.

BASE MAP DATA: All data is based on 1:24,000 scale and displays geographic names, places and road labels. Data obtained from various sources. Base map data is updated and new versions are available.

SHAPES AND DIGITAL DATA: Visit the CT DEP's website for this map and a variety of others to obtain a more updated version. Visit the CT DEP website to download the base map digital spatial data shown on this map.
