**DATA SOURCES**

Orthophotography: Imagery compiled by James M. Smith Co., and published by the DTRP Office and Long Island Programs.

Base Map Data: All data is based on 1:24,000 scale U.S. Geological Survey topographic maps.

Data on water bodies is from the U.S. Environmental Protection Agency. Data on roads is from the Long Island Regional Planning Office.

**EXPLANATION**

This map displays 2005 color infrared orthophotography of the Town of East Lyme, Connecticut. The area covered is approximately 4,000 by 5,000 feet (1,200 by 1,500 meters) and includes the vicinity of the town center, with offshore islands and the Connecticut River to the northeast.

The 2005 orthophotography has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GIS data displayed includes roads, rail lines, water bodies, wetlands, and offshore islands. The Connecticut River is shown in color for geographic interpretation. The data was collected during low tide. The map data is not colorfast and may not exactly match the true colors or shapes shown in the color orthophotography due to differences in spatial accuracy and data collection dates.
