This map displays 2006 National Agriculture Imagery Program (NAIP) orthophotography data for the State of Connecticut. It is a natural color, last on 1, 88, and 150, 158, 146, or 166, depending on the area. The water color is not color balanced so tonal imbalances between individual input images are not corrected. This will cause differences in the range and intensity of colors depending on the area viewed. The location and slope of features in other data layers will not match the location of such features in the orthophotos. Also shown are airports, hospitals, educational facilities, train stations, important geographic locations and ferry crossings are displayed yet may not match the locations of such features in other data. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed yet may not match the locations of such features in the orthophotos. Important geographic locations and natural features are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Imagery provided by the National Agriculture Imagery Program (NAIP) is a part of the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City, (NAIP); a part of the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, railroads, and airports. Base map data is neither current nor complete. National data is based on U.S. Geological Survey data.
