This map displays 2008 National Agriculture Imagery Program (NAIP) orthophotographs for the State of Connecticut. It is a natural color, false color, 3.39 feet (1 meter) aerial survey taken on July 3rd, 10th, 15th, and 16th. The orthophotographic data is not color balanced so visual differences between individual input images is not accounted. This will create differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streams, railroads, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.
