This map displays 2008 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a natural color, leaf-on, 3.39 feet (1 meter) aerial survey taken on July 3rd, 10th, 11th, 15th, and 16th. The statewide mosaic is natural color, leaf on, 3.39 feet (1 meter) aerial survey taken on July 3rd, 10th, 11th, 15th, and 16th. The statewide mosaic is National Agricultural Imagery Program (NAIP), is provided by the USDA Agricultural Stabilization and Conservation Service through the Agricultural Research Service and is available in a digital format. The input image is not corrected. This will create differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection done. Street-level data such as major interstates, US routes, state routes, strate railroads, and ferry crossings are not displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, important geographic locations and town boundaries. Street data is based on TeleAtlas copyrighted data. Street data is not color balanced so visual imbalance between individual input images is not corrected. This will create differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection done. Street-level data such as major interstates, US routes, state routes, strate railroads, and ferry crossings are not displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, important geographic locations and town boundaries. Street data is based on TeleAtlas copyrighted data. Map prepared by CT DEP, December 2010.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP). Is provided by the USDA Agricultural Stabilization and Conservation Service through the Agricultural Research Service and is available in a digital format. The input image is not corrected. This will create differences in the range and intensity of colors depending on the area viewed.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their boundaries, town boundaries, airports, railroads, and ferry crossings. Street-level data is not color balanced so visual imbalance between individual input images is not corrected. This will create differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection done. Street-level data such as major interstates, US routes, state routes, strate railroads, and ferry crossings are not displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, important geographic locations and town boundaries. Street data is based on TeleAtlas copyrighted data.

MAPS AND DIGITAL DATA - Visit the CT ECO website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.
