The statewide mosaic is displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographical locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agricultural Imagery Program, (NAIP), is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their boundaries, roads, boundaries, highways, and railroads. Data may be outdated or incomplete. Street data is based on U.S. Geological Survey data.

MAPS AND DIGITAL DATA - Visit the CT DCP website for this map and a variety of others at www.ct.gov. Visit the CT DCP website to download the base map digital orthophotograph data used on this map.

EXPLANATION

This map displays 2008 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a natural color, false color, 3,280 feet (1 meter) aerial survey taken on July 1st, 2nd, 3rd, 4th, and 5th. The statewide mosaic is not color balanced so visual imbalance between individual input images is not centered. This will create differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographical locations and waterbodies are labeled.
